

Code of conduct

code of conduct needs to be submitted on gitlab

Feedback on code

API is alright however gitmapping without anything is fine. Usually not blank is used instead of a null exception for the user name field.

Memory mode can be used so not everything is saved in the database after the application is closed.

HCI feedback

Title page is necessary page numbers and all other basic report stuff. When making a claim do it with a reference. Referrals to sections, number all images and give an explanation. For the given feedback give all the points that could be improved and give the number of how often that came back in the reviews. So we can see what the more important things are.

Sprint feedback

Requirements separate from issues, so split requirements into multiple issues. **Add a description to issues that are not clear** and split issues into smaller points that need to be in there. Requirements of the backlog can be deleted after finished. Backlog blocked issues can be done but is not necessary.

Miscellaneous

unit test no difficult tests which have not been discussed yet.

deleted branches if deleted nobody can see them only if you have it local you can still see them.

Work what to do and how to divide it

Start on the must haves unless there is a dependency problem. Backlog is online check brightspace. This week questions need to be uploaded to activity bank. upload all questions we have. Strive to divide equally doesn't really matter if there are some differences.

Deadlines

next week buddy check

this week questions to activity bank and hci assignment

everyone needs a commit a merge request and a comment on a merge request. clear comments on merge request and give a feedback in the comment. Demo in week 6, TA wants to see the bare minimum.

How the questions should be implemented

questions with inheritance read something about it on the internet. Abstract class questions should be implemented and a repository for the different types of questions.

Look up different inheritance strategies and choose the most suited one for this application.

TO DO

tab to 4 spaces in all classes
