

Should we have an admin panel on the start screen

- Free to implement access to admin mode however
- It should have ui to change things

How to store questions

- Free to implement however (leave system as is)

Feedback to sprint

- Keep doing MR, estimates, define when an issue is done

Gitlab comments

- Try to balance out, everyone is expected to comment, but not a requirement

Deadlines

- We set our own pace from now on, we are just expected to finish all the must-haves by the end.
- Friday week 9 is deadline for code & final buddy check.

Self-reflection

- Try to finish before Sunday evening.

Scripted warning email

- A (slightly outdated) email will be sent to you if you do not have enough contribution, send an email to Ruben if you receive it.

Commit size

- We are graded for lines of code and not number of commits
- Maybe discuss what is a good commit size.

- We should not change previous commits once committed, as it makes it harder to grade.
