

WARNING

- The spread of coding contribution is too big. Some people code too few lines!

Tips

- Always test methods before merging (never create a separate “test” issue or branch)
- We don't need to test the scenes

Point System

- Following is fine for the TA:
 - o 500points per correct answer
 - o Extra points for answering faster
 - o Open question: Points based on % is fine (if not in requirements specified, we are free to be creative)

Storing Questions & Activity Bank

- Permanently Storing Questions: Database is persistent (can be done somehow?), data should stay in database after restarting server
- All questions are stored in the database and you always pick a random question from the database
- Activiti Bank: We can fix the questions or just take the given questions (recommended)

Presentation

- We should wait with it until we have the presentation requirements
 - o 2-3 people should present, if they don't make any other requirements
 - o They ask questions to the whole group and not individually (though it can happen under some circumstances)

Miscellaneous

- 10h of coding per week is good
- Progress is fine and if we finish all must have's this week then its great
