

How does the TA grade

The TA checks attendance and what we say in the meetings. He also looks at comments and code via GitLab.

Merge to development branch, put comments. He can check the alter on the merge requests.

Own meetings

Split up tasks and divide over the team members. Will be done on Monday meeting and the TA will see who is assigned etc. We can upload agendas from ourselves to GitLab!

Planning ahead

For this we will use Sprint/Scrum. Every week we will see: how far are we and what issues can we do? We will have to estimate how long those issues take. We also must be able to adapt, for example if an issue takes longer than expected.

Grading:

- The TA grades over the full scale of the project. There is a rubric and there is a communication section with subsections, so not only the TA meeting.
- Teamwork assignments are pass/fail.
- For the pass/fail assignments - Reasonable answers. Few sentences.
- In the first weeks we need to get familiar with git, then in week 4 we get gradings about sprint. We should start in week 3 so we can ask questions.

Next week

Practice run for a sprint. We can make a window for the front end for example on the sprint.

Deadlines

- HCI draft: mockup and send to other team and make it professional and human friendly.
- Information literacy deadline, separate from OOPP assignment don't forget to sign up for it. It is about how to read sources and it has a quiz which you have to complete. Submit backlog as issue on GitLab. We don't have to assign people to it and we don't need the won't haves.
- Discuss agreements and hand Code of Conduct in on Brightspace.
- Merge request from before Sunday.

Agenda

Action points for next week:

Fill in things related to next week and discuss it then.
